

FlowDent

The Vertical AI Operating System for Dental Insurance

Founders:

Stepan — Dental Clinician & Workflow Expert

Max — Agent Systems Engineer

Dental workflows are fundamentally broken — and AI products fail on them.

The Clinic Reality

- 30–50% of admin time lost to claims, eligibility, ortho tracking, and evidence submission.
- Legacy, locked-down PMS (OpenDental, Dentrix, Eaglesoft) offer brittle infrastructure.
- Insurance workflows demand rigor: multiday state, mandatory human review, zero-tolerance accuracy.

The Technology Failure

- Existing SaaS fall short: Almost all of what exists today can't drive automation to the very end due to ambiguities or inconsideration of sub-standard behavior.
- General-purpose AI fails on architecture: Cannot handle durability, restart safety, concurrency, or domain validation.

The Result: The largest segment of dentistry, small clinics, is stuck with 1990s software and no automation path.

Dental insurance is a multi-agent, multi-day, human-gated workflow.

Only a vertically-integrated, durable agent system can automate it.

Clinical Depth

- Our team has experience in every role: assistant, lab tech, claims coordinator, clinician.
- Deep understanding of CDT logic, payer evidence rules, PMS quirks, and human review gates.

Industrial-Grade Engineering

- Built by an engineer that designed deterministic resume, concurrency isolation, and production correctness.
- Off-the-shelf frameworks (LangGraph, CrewAI) break under dental workflow rigor.

The Market Gap

- Our only real competitor (Lassie) only serves enterprise DSOs and massive clinics, all while offering a fraction of our feature set.
- The long-tail of 150k+ small clinics remains completely untouched.

Insight: This combination of clinical depth and agent-systems engineering is rare, and no one has spotted the market gap yet.

FlowDent — The Vertical AI Operating System

Runs locally on the practice server, integrates with the PMS, and automates the claim lifecycle through a custom, durable agent-orchestration engine.

ERA Parsing Automated reading and data extraction	Claim Matching Intelligent reconciliation	Evidence Extraction Automated attachment compilation
Ortho Case Tracking Multi-month lifecycle management	Eligibility Checks Real-time patient verification	Payment Posting Seamless ledger updates
CDT Validation Code accuracy and logic checks	Human-in-the-Loop Structured review checkpoints	Deterministic Resume Flawless recovery after pauses/crashes

Why It Works: Built for the actual shape of dental insurance — long-running, multi-agent, human-gated workflows requiring correctness, durability, and local execution.

A custom orchestration engine built for correctness, not demos.

Why This Wins	
Cloud SaaS	→ Fails PHI constraints
Stateless Agents	→ Fail durability requirements
Monoliths	→ Fail component isolation
Off-the-Shelf Frameworks	→ Fail concurrency + correctness

Competitors must rebuild this entire substrate before competing on features.

FlowDent ClaimAssist

The first durable, local, agentic automation engine for dental insurance.

Key Product Surfaces:

- **ERA Inbox:** Parses ERAs, extracts payment data, matches to claims.
- **Claim Workspace:** Auto-validates CDT logic, attaches evidence, preps for submission.
- **Evidence Engine:** Extracts X-rays, perio charts, and photos from PMS.
- **Ortho Case Tracker:** Manages multi-month ortho cases and recurring payments.
- **Human-in-the-Loop Review:** Clinicians approve/correct; engine resumes deterministically.
- **AI Assistant:** Deep administrative reasoning and UI navigation support.

The Wedge: Small Clinics Using OpenDental

The Entry Point (\$1–3B Opportunity)

150,000+ small clinics in the US running legacy PMS with zero automation.

#1 operational bottleneck: Insurance administration.

Willingness to pay: \$500–\$2,000/mo.

Competitive Landscape: Zero competitors serving this specific segment.

Expansion (\$10B+ Opportunity)

Integrate with Dentrix, Eaglesoft, Dolphin.

Move upmarket to mid-size clinics and enterprise DSOs.

Expand into ortho, perio, and specialty practices.

The AI-Native OS

Expansion into other aspects of dentistry: Lab, Diagnostic, and PMS.

The wedge is small clinics. The destination is the infrastructure layer dentistry runs on.

Live in production. Real workflows. Real claims.

90%

Reduction in claim
processing time

99%

Reduction in
administrative errors

50+

Hours/Month of admin work
eliminated per clinic

Pilot Clinic (Live)

- Full access to claims, lab, and clinical ops.
- Deep integration with live workflows.
- Continuous iteration loop with practice managers and clinicians.

Market Validation

- Dozens of clinician interviews confirm insurance admin is their #1 operational bottleneck.
- Strong, validated demand for ClaimAssist.
- Multiple clinics lined up for expanded pilot deployment.

We are not guessing what clinics need — we are building with them, inside their workflows.

Tiered, usage-aligned pricing for the long-tail of dentistry.

Starter (Small Clinics)

~\$500/mo.

For 1–3 providers.
High pain, limited tooling
(OpenDental users).

Growth (Mid-Size Clinics)

Higher claim limits,
multi-provider support,
ortho case tracking included.

Enterprise (DSOs)

Unlimited usage, custom
integrations, dedicated
support. Scales into
thousands/month.

Add-Ons:

Ortho Add-On: Extended usage for orthodontist offices.

Bank Payment Verification: Automatic payment reconciliation with bank accounts via Plaid integration

The Economics

- Clinics spend \$20–\$40/hr on admin labor (outsourcing costs more).
- FlowDent replaces 50+ hours/month for ~\$500/mo.
- Zero marginal cost yields extremely high software margins.

We undercut our only competitors while offering a broader feature set.

Clinical depth + agent-systems engineering.

Stepan — Product Owner and Clinical Expert

- Former dental assistant, lab technician, and claims coordinator.
- Current dental student with deep exposure to CDT logic and payer rules.
- Unique founder-market fit: intimately understands every part of the clinic from the inside, and has sufficient technical experience for optimal communication in development.
- Secures pilot access, drives rapid clinical iteration, and leads product management.

Max — Lead Developer and Agent Systems Engineer

- Lead AI developer on TGCS's agentic team; built internal pipelines used by hundreds of engineers.
- Architected multi-agent systems with deterministic resume and human review gating.
- Leads mission-critical rewrite of TGCS's payment routing layer.
- Custom-built FlowDent's engine from scratch to solve where LangGraph/CrewAI fail.

**Start with the wedge.
Expand to the OS.
Own the category.**

Phase 4 — The AI-Native Dental OS

End-to-end practice intelligence.
Full PMS replacement.
The infrastructure layer dentistry runs on.

Phase 3 — Chairside Clinical Assistant

AI X-ray analysis & real-time diagnostic reasoning.
AI dental notes assistant.
Unified medical/dental knowledge base.

Phase 2 — Lab Automation

Bridge fragmented lab equipment + software.
Unified workflows for in-house labs.
Automated case planning + manufacturing guidance.

Phase 1 — Insurance and Front Desk Automation

Claims, ERAs, Eligibility, Evidence.
Ortho case tracking & Payment posting.
Durable Human-in-the-loop automation.
Appointment and call automation

We're applying to Speedrun.

To accelerate GTM, distribution, scaling, and to build the AI-native operating system for dentistry.

What Speedrun Unlocks

Rapid GTM iteration and distribution guidance.

Funding for cloud services and additional manpower to accelerate customer acquisition and software development.

Strong networking with product specialists and experts.

Our Commitment

We offer in-depth experience across dentistry and AI automation

We validate with real clinics.

We build infrastructure competitors cannot replicate.

Join us.
